Participation to the project PARADISE - realization of the Costs and Benefits analysis for the firm "Borgo Urbano di Cosimo". The first part of the work consisted in providing a comprehensive literature review on environmental impact assessment and systemic risk analysis related to Natural Capital (NC) in the agricultural sector, both for companies and financial institutions. The second part of the work consisted in the construction of the NC credit risk assessment for the firm "Borgo Urbano di Cosimo" located in Rome. The analysis aimed at promoting a resilient business model and sustainable entrepreneurship that included in its risk assessment the environmental risk and, most of all, aimed at promoting the implementation of innovative agricultural techniques in the firm's production process. Those techniques were seen as tools to mitigate the environmental risk.
